

Cutter screws 4.0mm shank in TUBS, all sizes

Save time and get perfect results with Reisser Cutter Pozi screws.

20° needlepoint allows the screws to penetrate softwood and other materials without making a pilot hole first.

Designed to be self-countersinking, so you won't need to drill a counterbore on any timber or timber based board.

The reinforced collar and Pozi head allow the screw to drive in quickly, so you don't need to worry about cam-out. Additionally, the unique construction ensures the wood won't split even if you're working close to the edge.

Yellow Tropicalized coating offers superior corrosion resistance, so you can use them safely for outdoor applications.
