

Rota/tip replacement blade cutter RT/13

Solid Carbide replaceable blades.

Tool body remains in place when changing blades, thus reducing down-time.

Straight cutters have blades with two or four cutting edges, allowing them to be rotated and locked in identical positions.

1/2 inch shank tools are ideal for use in production applications.

Clear economical advantage over conventional brazed tip tooling.

The single blade can be rotated 180 degrees to give double the life of a conventional tool.

Ideally suited for use with Trend Combi worktop jigs.

Suitable for plunge cutting.

Use on chipboard only.
