

9 1/2 Standard Angle Block Plane

Machined from grey cast iron and precision ground this plane is particularly useful for endgrain work.

The cutter is adjustable for both depth and alignment, and the standard 21 degree seating of the blade makes this a good performer on of the timbers that are to be found in the typical workshop.

The mouth is adjustable and can be enlarged or reduced to suit the requirements of the work being done.

The 40mm wide blade is hardened and tempered for durability.

Highly recommended.
