

Cryogenic bench plane blade - 2" - fits No 4 & No5

The Clifton Bench Plane cutting irons are now made from cryogenically treated 01 steel. This cutting iron has a hardness of 60 to 62 Rockwell C and the new cryogenic treatment means these blades will hold their edge for longer than their predecessors. This ensures that Clifton blades take an edge better than most other blades and hold it for longer. They blades are an impressive 3.6mm thick for improved stability and increased rigidity. They are accurately ground, embossed with the brand name and then individually checked for hardness. Wiped with oil after use to protect from rust and finger marks, these blades will serve you some excellent planing work.
