

# Corefix Dot & Dab Wall Fixing

This highly effective and innovative product was developed to safely secure heavy loads including cabinets and brackets to dot and dab plasterboard walls or board supported on battens. Quick to install, this patented product works by securing the load to the brick or block behind the board, bridging the problematic gap that dot and dab creates, by way of a zinc plated steel tube insert.

- Suitable for most modern homes with plasterboard / dot & dab walls
- Trusted and independently tested
- Fast installation, no specialist tools required, drill, 10mm bit, hammer & screwdriver
- For all wall types, brick, block and light weight concrete
