

Prostruct timber screw

Flange T-Drive Type 17point BZP

Product Speciation/Features

Torx 40 recess - ensures higher torque levels when using impact/rotary drivers with bit in box.

Asymmetrical thread with saw teeth – improved thread pull out, lower drive torque and easier installation.

Milled ribs on shank – cleans hole providing stress free installation.

Type 17 point – reduces risk of splitting timber within close to edge applications.

Special hardened steel - highly ductile (moves with the wood “rope effect”) provides maximum tensile and torsional strength whilst allowing for a maximum 45o bending angle.

Cr3 Bzp plating - environmentally friendly surface.

T-Seal™ wax coating - provides enhanced corrosion protection compared to conventional woodscrews.

500 hours salt spray (to red rust) – conforms to service class 1 & 2 with added protection in outdoor conditions not directly exposed to the elements such as carport and pergolas.

ETA approved - fasteners for timber structures EN 14592.
