Fixing Centres: 38mm

Additional information

Our euro door pulls are designed to be fitted with euro cylinders. This product is used on entrance doors to pull or push the door into the open/closed position.

Our back-to-back euro pull is forged from solid bronze which emphasises the high quality materials and manufacturing techniques used. A perfect design choice for external doors with matching products available.

This finish is manufactured from solid unlacquered bronze containing a minimum of 85% copper. Our aged bronze finish is matt and rich due to the finishing process we use to age the metal, this process initially darkens the material, however the finish will gradually oxidize over time revealing the warmer copper undertones. This finish has been salt tested to 480 hours.

Designed to match our other aged bronze front door furniture to create a feature entrance door.

This escutcheon is used with a euro profile lock in conjunction with a euro cylinder.

Maximum door thickness: 64mm.

Sold with matching bolt-through fixings which are concealed from the external side of the door.
