

Alukap-XR 60mm Wall Bar Any RAL Ref=

ALUKAP-XR Wall Bars with end caps are an alternative to complicated lead or lead alternative detailing as this wall bar provides a waterproof solution where the glazing structure meets a rising vertical wall. Once the glazing system is installed it can be snapped into place. Rafter gaskets are available in 45mm and 55mm regular and slot fit to help you install these bars in 3m, 3.6m, 4.8m or 6m lengths.

ALUKAP-XR is a weather-resistant glazing bar system from Clear Amber that sits atop rafters for a clean, attractive finish. The sturdy and durable system comes in a range of profiles and finishes, in both white and brown so you can match the rest of your building or surroundings with ease. Compatible with timber rafters, the fixings for ALUKAP-XR are concealed and made from aluminium like the rest of the system so you're assured quality and neat installation. Decorative finishing castings are also available so you can bring even more style to your system.

This range has no Rag gasket
