

# Cromar Roof & Gutter Seal

Roof & Gutter Sealant is a gun applied, rubberised, oil based sealant intended for sealing joints in gutters, roofing sheets and other similar applications. The sealant is semi-drying product and remains predominantly in a semi dry, paste like condition. The nature of the product ensures excellent adhesion to most surfaces.

Roof & Gutter Sealant is intended for external weather sealing and because of its non-drying nature, is ideally suited for lap joints where it will maintain a weather proof seal, even in very thin sections when applied between two sheet material, which are mechanically fixed together.
