

Steel bar F clamp with clutch

Jorgensen steel bar clamps are seriously strong.
 Both the fixed and sliding heads are manufactured from cast-iron that is protected with an orange, powder coated finish
 With a high-carbon, rust-resistant steel bar these clamps boast 80,000 pounds per square inch of tensile strength.
 The fast-acting sliding head is acme threaded and accommodates a cold-drawn steel screw with a large easy-grip handle and swivel pad.
 The multiple-disc-clutch design allows the sliding head to hold securely at any point along the bar.
